

Impulse for Traders

Trade at the speed of thought

IMPS — non-custodial · on-chain

getimpulse.online

Choose Your **Edge**

Impulse combines two core capabilities depending on what a trader needs in the moment.

Trade

Buy button injected on every ticker & CA

Works on X, Telegram, Reddit, any site

Stocks, memes, and tokens — one flow

No leaving the timeline to swap

Research

Bubblemaps holder distribution, inline

fomo thesis + community Impulse thesis

Pump.fun caller & callout tracking

X profile analyzer shows what any wallet holds

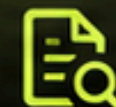

Getting Started

Trade Flow

- 1 1. See a ticker or CA anywhere online
- 2 2. Click the Impulse overlay button
- 3 3. Confirm — the swap executes non-custodially

No wallet hopping. No new tabs.

Research Flow

- 1 1. Open the overlay on any token
- 2 2. Scan holders, thesis, and callouts inline
- 3 3. Decide with full context — still in seconds

Five platforms checked. Zero tabs opened.

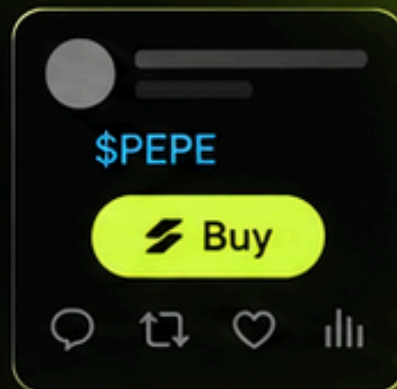

Everywhere You Trade

Impulse is not one site — it rides along wherever a ticker or contract address shows up.

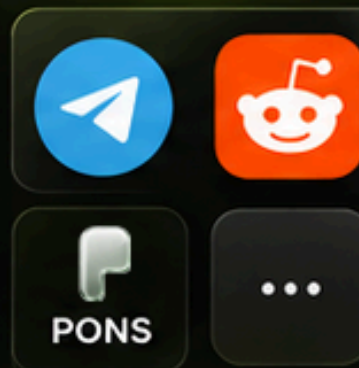

X (Twitter)

Buy button injected next to every cashtag and CA in the timeline

Any Site

Telegram, Reddit, launchpads like Pons — wherever a CA appears

X Profile Analyzer

See every token an account holds, plus recent trades

Mobile

Android live now via Yandex + extension; iOS in progress

Copytrading & Autotrading

Follow and autotrade fomo and Pump.fun users directly from the extension — new this week.

1. Follow a wallet

Track any fomo or Pump.fun trader from their profile

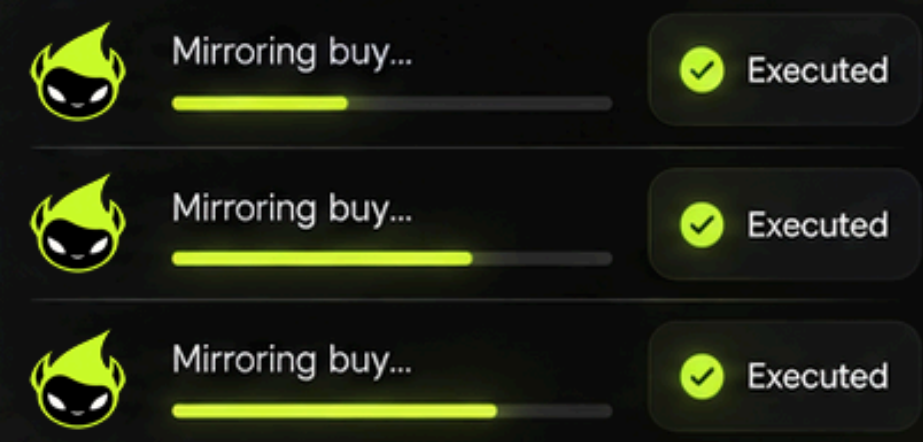

2. Set your rules

Position size and limits, configured once

Position size	0.5 SOL	▼
Max per trade	2 SOL	▼
Daily limit	10 SOL	▼

3. Autotrade executes

Impulse mirrors their buys automatically, non-custodially

Non-Custodial By Design

Impulse never takes custody of funds.
Speed doesn't come at the cost of control.

Keys stay local

MetaMask-style, fully non-custodial — private keys never leave your device

No backend attached

There is no server holding user funds or signing on your behalf

Independently audited

Security review completed by Solidproof, published publicly

Trader Responsibility

Impulse speeds up execution and research.

Regardless of the tools used, traders remain fully responsible for:

Wallet & seed
phrase security

Verifying
contract addresses

Independent
research beyond
any thesis

Position sizing &
risk management

Tax & regulatory
compliance

Long-term
trading decisions

Impulse provides infrastructure and research surfacing, but does not provide financial advice or assume trading risk.

Impulse vs. Manual Trading

Both get you into a trade. **Only one keeps you on the timeline the whole way.**

	 Impulse	Manual Trading
In-feed buy button	 Yes	 No
Multi-platform (X, TG, Reddit, any site)	 Yes	 No
Non-custodial execution	 Yes	 No
Integrated research (Bubblemaps, thesis, callouts)	 Yes	 No
Copytrading & autotrading	 Yes	 No
Creator rewards on referred trades	 Yes	 No

Fee Structure

Impulse applies a small fee on trades executed through the extension. When a trade comes from a creator's thesis post, part of that fee flows back to them.

Standard Swaps

A standard fee applies on every trade executed through the Impulse buy button, regardless of platform. Applies automatically — no separate approval step.

Creator Rewards

Post a thesis on a token you hold. When someone buys through your post using Impulse, you earn a share of the swap fee — paid in ETH or stocks. Rewards accrue automatically off referred trades.

Thesis Post

Share your thesis

Referred Trade

Someone buys through your post

Creator Reward

You earn a share in ETH or stocks
